SOFT SKILLS

Teamwork

Empathy

Communication

Flexibility

Fast learning

Problem solving

WEB DEVELOPMENT PROJECTS

Front End Project (Browser Game)

- The first and individual project of the bootcamp,
- Finished in one week, after the first 2 weeks of the course,
- Constructed purely with JavaScript's canvas (with a few jQuery animation features used for the instructions page),
- Chosen as the 3rd best in the class.

Full Stack Project (Recommendations page)

- Pair programmed,
- Made in one week after 5 weeks of bootcamp,
- Used technologies: Node.js, Express, MongoDB, Mongoose, Google Maps API and for the frontend - Handlebars,
- Features: register, login, edit of the user account; full CRUD experience with recommendations; finding transportation; admin rights and restrictions; video upload.

Full Stack Project (Study aid - flashcards)

- Pair programmed,
- Technologies: Angular.js; MongoDB; Express.js; Mongoose; Bulma; multiple npm packages,
- Purpose: educational app, letting a user interact in many ways with memory cards,
- Technical features: register, login, full crud experience with cards, categories and groups, within administrator rights,
- Personal features: user can see their own and group statistics, find a person with complementary results and e-mail them from the app level,
- Chosen as the 2nd best project in the class.
